

WELCOME TO RECONSTRUCTIVE FOOT & ANKLE INSTITUTE, LLC NEWS YOU CAN USE!

What are Shoe Inserts?

You've seen them at the grocery store and at the mall. You've probably even seen them on TV and online. Shoe inserts are any kind of non-prescription foot support designed to be worn inside a shoe. Pre-packaged arch supports are shoe inserts. So are the custom-made insoles and foot supports that you can order online or at retail stores. Unless the device has been prescribed by a doctor and crafted for your specific foot, it's a shoe insert, not a custom orthotic device despite what the ads might say.

Shoe inserts can be very helpful for a variety of foot ailments, including flat arches and foot and leg pain. They can cushion your feet, provide comfort, and support your arches, but they can't correct biomechanical foot problems or cure long-standing foot issues.

The most common types of shoe inserts are:

- Arch supports: Some people have high arches. Others have low arches or flat feet. Arch supports generally have a bumped-up appearance and are designed to support the foot's natural arch.
- Insoles: Insoles slip into your shoe to provide extra cushioning and support. Insoles are often made of gel, foam, or plastic.
- Heel liners: Heel liners, sometimes called heel pads or heel cups, provide extra cushioning in the heel region. They may be especially useful for patients who have foot pain caused by age-related thinning of the heels' natural fat pads.
- Foot cushions: Do your shoes rub against your heel or your toes? Foot cushions come in many different shapes and sizes and can be used as a barrier between you and your shoe.

Choosing an Over-the-counter Shoe Insert

Selecting a shoe insert from the wide variety of devices on the market can be overwhelming. Here are some podiatrist-tested tips to help you find the insert that best meets your needs:

- Consider your health. Do you have diabetes? Problems with circulation? An over-the-counter insert may not be your best bet. Diabetes and poor circulation increase your risk of foot ulcers and infections, so schedule an appointment with a podiatrist. He or she can help you select a solution that won't cause additional health problems.
- Think about the purpose. Are you planning to run a marathon, or do you just need a little arch support in your work shoes? Look for a product that fits your planned level of activity.
- Bring your shoes. For the insert to be effective, it has to fit into your shoes. So bring your sneakers, dress shoes, or work boots, whatever you plan to wear with your insert. Look for an insert that will fit the contours of your shoe.
- Try them on. If all possible, slip the insert into your shoe and try it out. Walk around a little. How does it feel? Don't assume that feelings of pressure will go away with continued wear. (If you can't try the inserts at the store, ask about the store's return policy and hold on to your receipt.)

What Are Prescription Custom Orthotics?

Custom orthotics are specially-made devices designed to support and comfort your feet. Prescription orthotics are crafted for you and no one else. They match the contours of your feet precisely and are designed for the way you move. Orthotics are only manufactured after Dr. Michaels has conducted a

complete evaluation of your feet, ankles, and legs, so the orthotic can accommodate your unique foot structure and pathology.

Prescription orthotics are divided into two categories:

- Functional orthotics are designed to control abnormal motion. They may be used to treat foot pain caused by abnormal motion; they can also be used to treat injuries such as shin splints or tendinitis. Functional orthotics are usually crafted of a semi-rigid material such as plastic or graphite.
- Accommodative orthotics are softer and meant to provide additional cushioning and support. They can be used to treat diabetic foot ulcers, painful calluses on the bottom of the foot, and other uncomfortable conditions.

Dr. Michaels uses orthotics to treat foot problems such as plantar fasciitis, bursitis, tendinitis, diabetic foot ulcers, and foot, ankle, and heel pain. Clinical research studies have shown that podiatrist-prescribed foot orthotics decrease foot pain and improve function.

Orthotics typically cost more than shoe inserts purchased in a retail store, but the additional cost is usually well worth it. Unlike shoe inserts, orthotics are molded to fit each individual foot, so you can be sure that your orthotics fit and do what they're supposed to do. Prescription orthotics are also made of top-notch materials and last many years when cared for properly. Insurance often helps pay for prescription orthotics.

When to Visit Dr. Michaels

If you are simply looking for extra cushioning or support, you may wish to try an over-the-counter shoe insert first. If you have serious pain or discomfort, however, schedule an appointment with Dr. Michaels. He will assess your overall health and look for any other contributing factors. Dr. Michaels is specially trained to evaluate the biomechanics of the lower extremity.

Dr. Michaels will examine your feet and how you walk. He will listen carefully to your complaints and concerns and assess the movement and function of your lower extremities.

The information gathered during the exam will help Dr. Michaels determine if shoe inserts might be helpful or if you need prescription orthotics. If orthotics are needed, He will capture a three-dimensional cast of each foot. Those casts, as well as any measurements obtained by Dr. Michaels, are used to create a set of unique foot supports that will improve your foot movement and lead to more comfort and mobility. Dr. Michaels might also suggest additional treatments to improve the comfort and function of your feet.

To prevent infections from nail salons or spas and to provide Comprehensive Foot & Ankle Care® we are pleased to announce that we have started to perform Foot Facials or medical grade pedicures and manicures in our offices. A one hour Foot Facial is relaxing and safe. We are providing this service to you as a safe alternative to salons that may not sterilize their equipment or use dirty products on your feet. We use organic and/or natural products that clean and moisturize your skin and your nails. A natural nail polish with no harsh chemicals can be used or your nails can be buffed to a shine. You will enjoy a calf massage and scrub in a clean, safe and sterile environment. Nothing that touches you will touch another. Our sterilization process is so thorough that it has been published in scientific journals. We've analyzed every aspect of this process from the metal used in the basin, the ingredients in the products to the shape and texture of the products and instruments used. Bottom line: your feet will look and feel great and I'll make sure you're safe. Please call now to schedule your 1 hour Foot Facial today! A manicure and pedicure are about 1.5 hours and extremely relaxing.

To make an appointment at our Frederick office, please call 301.418.6014. 2100 Old Farm Drive Ste. D, Frederick, MD 21702

To make an appointment at our Hagerstown office, please call 301.797.8554. 1150 Professional Court, Suite C, Hagerstown, MD 21740

We look forward to solving your foot and ankle problems with Comprehensive Foot and Ankle Care® and treating you like a member of the family.

Very truly yours,

Daniel D. Michaels, DPM, MS & Associates
